ABOUT ME

I am a Senior Front-End Developer with extensive experience in leading and managing development teams. Skilled in JavaScript, HTML, and CSS, I specialize in modern frameworks such as Vue and React, with additional proficiency in Angular. While my expertise lies in front-end development, I am also familiar with back-end technologies, allowing me to effectively design and implement solid contracts between front-end applications and APIs.

Beyond my technical skills, I am a highly responsible and committed professional who takes pride in writing clean, maintainable code. I believe that attention to detail and a strong work ethic are key to delivering high-quality, user-centric solutions. Passionate about web development, I continuously seek to stay ahead of industry trends and foster a collaborative environment where innovation and best practices thrive.

JOB EXPERIENCE

2025-Actual / Senior Frontend Developer

BERSHKA

As a Senior Frontend Developer at Bershka, I work in the Catalog & Core team, building and maintaining a large-scale international eCommerce platform. We develop under an SSR paradigm with Nuxt 3, where I have led migrations from Nuxt 2 to Nuxt 3 and from JavaScript to TypeScript, ensuring stronger performance and maintainability. My role also involves implementing accessibility best practices, integrating analytics with Google Analytics, and designing workflows that guarantee secure, efficient, and scalable development.

2023-2025

NEORIS

Developing the architecture, components and modules of an important court officer web for the Ministry of justice of Spain. Managing a large developer team composed of front and back devs, giving them analysed and estimated tasks performing QA e2e tests with Cypress. Project made entirely with Vue3, build with Vite, state managed with Vuex, and others web tools like Sass, Lodash, Vue-use etc...

2021-2023 / Frontend Developer

METAENLACE

Frontend web SPAs and MicroFrontend. Working in the architecture department for a bank client. Developing new features/ componentes that was provided in a library spread via Microfront in all the bank webs.
Also I worked for another bank in a customer banking portal made with Vue2 that we migrated into Vue3 later, this web was made with Webpack, Vuex and custom components, the web was very focused in the responsive design as it is used for mobile. This client also had some landing pages what we created using React.
